NORTHERN's Española
Campus, Metal Trades
Building

FREE and requires a \$50 deposit
to hold enrollment. *Deposit is fully
refundable when you attend. You will
only be charged if you do not show
up. Limited capacity.*

2026 / CONTINUING EDUCATION / NORTHERN NEW MEXICO COLLEGE

This comprehensive training program provides participants with essential wildland firefighting skills and nationally recognized certifications (NWCG S-130, S-190, and L-180).

The program involves the integration of information technology to support the management and suppression of wildfires. This includes using Geographic Information Systems (GIS) for mapping and tracking fire progression, real-time data collection from drones and satellites for situational awareness, communication systems for coordinating response efforts, and predictive modeling to anticipate fire behavior. These technological tools enhance decision-making, improve safety for firefighters, and increase the efficacy of firefighting operations.

What to Expect

- Hands-on field training with real fire fighting equipment
- Observation of fire engine operations and components
- Learning firefighting tools and equipment
- Fire suppression techniques
- Q&A sessions with professional firefighters

Requirements

- An assessment must be taken through Workforce Solutions (provided on campus)
- No prior firefighting experience or wildland certification necessary
- No materials or gear needed, all equipment provided

Important Notes

PACK TEST: The physical fitness pack test is NOT part of this class. It is administered separately by hiring agencies when you apply for firefighting positions.

RED CARD: The Incident Qualification Card (Red Card) is issued by your hiring agency after you complete both this training AND the pack test.

I-100 TRAINING: Introduction to Incident Command System (I-100) certification is not included in this course.
