

Bachelor of Engineering (BEng) SOFTWARE ENGINEERING

The curriculum of the BEng in Software Engineering is designed for those engineering students who intend to launch a career in the design, development, testing, installation, and maintenance of computer software modules and systems. Coursework in the program is practice-oriented and prepares students to work in a variety of computer intensive environments that involve engineering analysis and software management – technical organizations, small or large businesses, product design or manufacturing companies, and data-directed services. The breadth of training in hardware, software, computer logic and laboratory tools will enable the graduate to work in a variety of roles in such environments as a software engineer or developer, software systems engineer, software project manager, data applications, or computer engineer, test and integration manager or technologist in computer applications. The graduate of this curriculum will be a software engineering specialist, but broadly versed in mathematics, physics, computer science, software development and business fundamentals.

Students are advised to not attempt upper division coursework (300 and 400-level classes unless you have earned a GPA of 2.50 or better in all IT, CS, and CT coursework taken at the 100 and 200-level. Failure to maintain an overall GPA of 2.00 or better in all coursework will be sufficient cause for being dropped from the program.
